Ms. Marlene H. Dortch
Secretary
Federal Communications Commission
45 L Street NE
Washington, DC 20554

Re: *Expanding Flexible Use of the 3.7-4.2 GHz Band*, GN Docket No. 18-122

Dear Ms. Dortch,

Spectrum is the lifeblood of the wireless economy and 3.7-3.98 GHz spectrum (“C-Band”) is an important component of 5G deployment in the United States. Substantial work has been undertaken over the last several years to confirm the ability of the United States to achieve the dual objectives of enabling robust, reliable, and timely deployment of 5G services in C-Band while supporting air traffic safety. In February 2020, the Federal Communications Commission (“FCC”) adopted licensing and technical rules that serve to ensure coexistence between new C-Band operations and radio altimeters operating more than 220 megahertz away in the 4.2-4.4 GHz band. Despite the sufficiency of the FCC rules, subsequent collaborative engagement across affected industries and with the FCC and Federal Aviation Administration has resulted in the development of the attached voluntary commitments relevant to this coexistence.

As C-Band licensees, we will abide by the attached voluntary commitments. These voluntary commitments will support full-power deployments across C-Band, and are crafted to minimize the operational impact on our C-Band operations. In agreeing to these commitments, we reserve any and all rights and privileges conferred by our lawfully held spectrum licenses issued by the FCC.

Sincerely,

/s/ Henry G. Hultquist

Henry G. Hultquist
Vice President-Federal Regulatory

Attachment

Appendix:

C-band Licensee Voluntary Commitments

The following voluntary commitments only apply to licensees who plan to operate in the C-Band spectrum in the locations identified and during the time periods identified below.

1. Operations Above 3.8 GHz.

- a. **Until June 30, 2023:** For outdoor base stations deployed in Coordination Zones # 1-3 in Figure #2 near the 188 airports identified in Table #1 the proposed transmissions will be assessed using the Signal-in-Space process described in commitment #4.
- b. **July 1, 2023 to Commitment Sunset Date:** Operations at 3.8-3.98 GHz will occur in compliance with all other commitments below.

2. Fundamental EIRP Limits in Rural Partial Economic Areas.

- a. **Until December 31, 2023:** For all base stations operating at 3.7-3.98 GHz, EIRP will not exceed 1640 Watts/MHz EIRP (62 dBm/MHz).
- b. **After December 31, 2023:** For all base stations operating at 3.7-3.98 GHz, specifically in rural areas, carriers will comply with the EIRP previously established in the FCC's technical rules in 47 CFR 27.50(j).

3. EIRP at Elevation Limit.

- a. **Until Commitment Sunset Date:** For outdoor base stations operating at 3.7-3.98 GHz, EIRP as a function of the elevation angle will be limited as pictured in Figure #1, which is set out mathematically as follows:
 - i. C-Band Mitigated Airports (CMA) Elevation Mask: Inside Coordination Zones # 1-3 shown in Figure #2 for the 188 airports identified in Table #1:
$$\text{Attenuation} = \min [0, -14 + 20 * \log_{10} (1/\sin(\Theta+11.5))] \text{ dB, where } \Theta \text{ is the elevation angle (in degrees) above the horizontal plane at phase center of the base station antenna.}$$
 - ii. Nationwide Elevation Mask: At all other locations:
$$\text{Attenuation} = \min [0, -14 + 20 * \log_{10} (1/\sin(\Theta))] \text{ dB, where } \Theta \text{ is the elevation angle (in degrees) above the horizontal plane at phase center of the base station antenna.}$$
- b. **Deviation Coordination:** We may request coordination for one or more 3.7-3.98 GHz transmission sites where we desire deviations from these Elevation Masks. The FAA will assess these coordination requests taking into account the proposed substitute elevation mask and any other mitigation factor submitted in order to determine if a reduction in the fundamental power at that site is necessary in order to satisfy FAA safety concerns. We anticipate that the FAA will acknowledge any such request within one business day and will attempt to process the request promptly (i.e., generally within 2-3 weeks, unless the complexity of the particular request requires additional time).

4. Base Station Coordination Near 188 C-Band Mitigation Airports (CMA).

- a. **Definition:** Consistent with the process and applicable timeline outlined under this item, we

will continue to coordinate with the FAA all outdoor base stations near the 188 airports identified in Table #1.

i. Signal-in-Space assessment in the Coordination Zones:

- A.** For all outdoor base stations requiring coordination as defined in item 4.a.ii, we will submit to the FAA confidential coordination information specified in item 4.a.iii at least 30 days prior to transmission.
- B.** Using the Signal-in-Space (SiS) process developed by the FAA, received Power Spectral Density (PSD) levels from each base station within the Coordination Zones are determined within a protected three-dimensional space called the Runway Safety Zone (RSZ). This RSZ is defined per runway by the FAA for the 188 airports listed under Table #1. Based on this SiS assessment, the FAA will provide an allowable EIRP PSD in dBm/MHz for each base station such that the received PSD from the base station within the RSZ is at or below an applicable PSD curve defined in Figures #3A and #3B.
- C.** In accordance with the timelines outlined under item 4.b of this appendix, we will configure each base station to transmit at or below the allowable EIRP PSD.

ii. Base stations requiring coordination:

During the date ranges in item 4b, for outdoor base stations operating at 3.7-3.98 GHz deployed in Coordination Zones # 1-3 in Figure #2 for the 188 airports identified in Table #1, the C-band licensee will coordinate with FAA as follows:

- A.** Coordination Zone #1: all base stations deployed in this area.
- B.** Coordination Zone #2: all base stations where either:
 - Fundamental EIRP exceeds 126 Watts/MHz EIRP (51 dBm/MHz), or
 - Antenna Radiation Center height exceeds 50 feet Above Nearest Runway Elevation (ARE).
- C.** Coordination Zone #3: all base stations where either:
 - Fundamental EIRP exceeds 1640 Watts/MHz EIRP (62 dBm/MHz), or
 - Antenna Radiation Center height exceeds 150 feet Above Nearest Runway Elevation (ARE).

iii. Coordination information:

- A.** Base station ID
- B.** Applicable airport (from Table #1)
- C.** Base station latitude & longitude (decimal degrees)
- D.** Desired antenna phase center height above ground level
- E.** Desired fundamental EIRP (dBm/MHz)
- F.** Desired start and stop frequency (MHz)

b. Applicability:

- i. **Until June 30, 2023:**** We will operate coordinated base stations consistent with FAA requests (e.g., lower EIRP) to limit 3.7-3.98 GHz emissions to the established Group 3 Curve PSD power levels defined in Figure #3A and #3B over the FAA-defined RSZ.
- ii. **July 1, 2023 to Commitment Sunset Date:**** We will operate coordinated base stations consistent with FAA requests (e.g., lower EIRP) to limit 3.7-3.98 GHz emissions to the established Group 4 Curve PSD power levels defined in Figure #3A and #3B over the FAA-defined RSZ.

c. **Deviation Coordination:** We may request deviation for one or more 3.7-3.98 GHz transmission sites where the FAA's requested reduction in EIRP levels are below those permissible under FCC rules. We anticipate that the FAA will acknowledge any such request within one business day and will attempt to process the request promptly (i.e., generally within 2-3 weeks, unless the complexity of the particular request requires additional time). The request for re-coordination will include proposed new mitigating parameters such as but not limited to:

- i.** Ground clutter data or physical obstructions impacting signal propagation

- ii. Sectorization of base stations (the as-built azimuth for each mounted antenna)
- iii. Characteristics of the antenna that limit emissions towards aviation resources
- iv. Comprehensive propagation analysis showing proposed PSD values at the airport from 0 to 1000 ft above ground level (as determined by our industry modeling tools)

5. Notice of C-Band Operations for Other Airports.

a. **Definition:** We will provide the FAA with notice (at least 30 days in advance) of outdoor base stations planned for operation in the 3.7-3.98 GHz through February 1, 2024, as follows:

- i. **Until July 1, 2023:** We will provide prior notice of all outdoor base stations.
- ii. **July 1, 2023 – February 1, 2024:** We will provide prior notice of outdoor base stations to be deployed in the Notification Zone in Figure #4 for the non-CMA airports listed in Table #2. (By mutual agreement, the number of airports subject to notification may decline over time.)

b. **Notification information:**

- A. Base station ID
- B. Applicable airport (from Table #2)
- C. Base station latitude & longitude (decimal degrees)
- D. Antenna phase center height above ground level
- E. Fundamental EIRP (dBm/MHz)
- F. Start and stop frequency (MHz)

c. **Further Refinement:** Through February 1, 2024, we will collaborate with the FAA as it continues to evaluate the need for these notifications as aviation equipage updates continue. The goal of this refinement will be to reduce or eliminate (i) the Notification Zone and (ii) the need for notice at certain airports or certain antenna heights while ensuring the FAA has sufficient information about 5G deployments in the 3.7-3.98 GHz range to assess air safety.

6. Spurious Emissions (i.e., OOB) Limits From 3.7-3.98 GHz Operations into 4.2-4.4 GHz.

a. **Until Commitment Sunset Date:**

- i. From outdoor operations, maximum -48 dBm/MHz conducted spurious emissions.
- ii. From in-building operations, maximum -30 dBm/MHz conducted spurious emissions.

b. **Deviation Coordination:** We may request deviation for one or more 3.7-3.98 GHz transmission sites from these conducted spurious emission thresholds. The proximity of the 5G equipment to flight operations will be the key factor in determining whether the proposed deviations will meet the FAA's safety concerns. We anticipate that the FAA will acknowledge any such request within one business day and will attempt to process the request promptly (i.e., generally within 2-3 weeks, unless the complexity of the particular request requires additional time).

7. Commitment Sunset Date. Where referenced above, the commitment will last until January 1, 2028, at which point it will sunset unless extended or reduced by mutual agreement. A mid-term check-in will occur in July 2026 to assess the status of aviation's long-term migration to next-generation radio altimeters and the need for the sustainment of these commitments.
